III. Planning Study Summary

Please give a brief summary of the planning study using no more than 150 words.
The Metropolitan Wastewater Management Commission (MWMC) serves the Eugene/Springfield area and has existing and potential capabilities of producing Class C and Class A recycled water for community applications. This study will accelerate the application of recycled water use for currently identified irrigation, industrial use, and wetland enhancement to perfect production and delivery capabilities of MWMC. Furthermore, this study will seek potential early user-partners to pilot recycled use in the community. The combined effort will be guided by collaboration with local municipalities, irrigation associations, and water utilities to plan for future use and availability of recycled water. This study includes technical and economic evaluations and engineering design to steer planning decisions. Conservation and protection of groundwater, municipal supply, and instream water will be considered in usage evaluations.
